# VSwitch

Default vSwitch

- VSwitch0 has a physical uplink (1) and two Port Groups
  - VM Network (you put VMs on this if you want them to have a Foster IP Address)
  - Management Network (esxi itself is on this portgroup)

Creating a new Internal Switch

Internal Portgroup

So VMs are added to Portgroups which in turn are added to vSwitches which may or may not have an uplink. This one does not.

Add port group - 350-Internal

Name	350-Internal
VLAN ID	0
Virtual switch	350-Internal
